Clinical Genetics Service

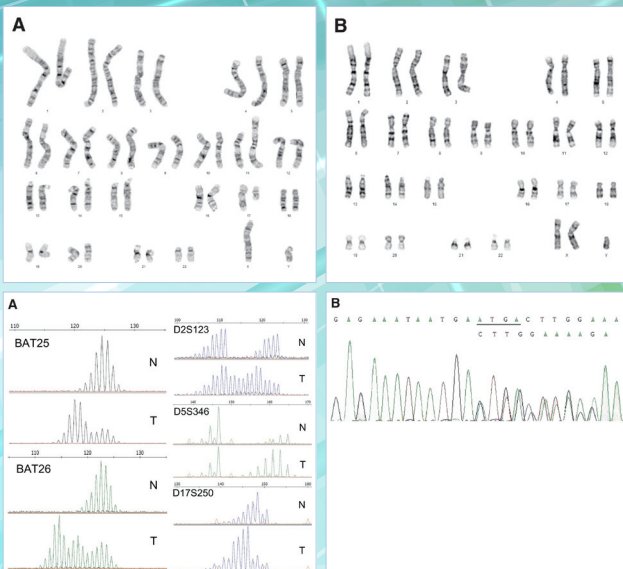

## Clinical Genetics Service

In 2016, Hong Kong Sanatorium & Hospital (HKSH) launched the first clinical genetics service in local private sector. With genetic assessment, diagnosis and counselling from our clinical geneticist, patients and their family members can have a better understanding of hereditary diseases and related risks.

## Purpose of Establishing Clinical Genetics Service

- To provide clinical genetic assessment, diagnosis and counselling to individuals and their families;
- To promote genetic health for all by way of clinical genetic screening and gene mutation evaluation; and
- To disseminate knowledge on genetics among the public and the medical personnel.

## Scope of Service

Patients and their family members will be advised on proper diagnostic workup by our clinical geneticist through genetic assessment and counselling. HKSH is equipped with a state-of-the-art genetic laboratory for a wide array of genetic screenings and tests. Professional teams of the IVF Centre and other related units are also dedicated to serving patients in need.

## Target Group

Any individuals or / and their family members:

- Diagnosed with genetic disease(s)
- Suspected of genetic disease(s)
